

1 The procedure to install Python Django on Windows OS

1. To install Python Django, Python should be already installed in your system.
2. For that you can refer to the Python installation sheet from Python tutorial on Spoken tutorial.
3. We will perform Python Django Installation on Command Prompt.
4. To Open Command prompt, Click on Start button and search for Command Prompt.
5. Command Prompt Terminal will be opened.
6. First please check the django-admin,for that type:
`django-admin --version`
7. Next, Check Python Version. For that type:
`python --version`
8. To create virtual environment,type:
`py -m venv sum`
9. To activate the virtual Environment,type:
`sum\Scripts\activate.bat`
10. Now we will install Django,for that type:
`py -m pip install Django`
11. After installation you will command like:
Successfully installed Django-5.1 asgiref-3.8.1 sqlparse-0.5.1 tzdata-2024.1
