

Snap Function

You can use the Snap function along with grids to position the objects accurately.

Snap to Lines - Snaps the edge of a dragged object to the nearest snap line when you release the mouse button.

Snap to Grid – It positions an object exactly on grid points.

Snap to Snap Guides - It positions an object exactly on a snap line.

Snap to Object Border - It positions and aligns an object nearest to the object border.

Snap to Object Points - It positions and aligns an object nearest to the object points.

Snap to Page Margins - It positions and aligns an object nearest to the page margin.
