Assignment-1
1. Read the data from the file pendulum_semicolon.txt available at the code file link of this tutorial.
2. This file contains data in two columns. These columns are separated by semi-colons.
3. Use the IPython help to see how to do this.

Assignment-2
1. loadtxt() can read data only from a file with one column. Is it True or False?
2. Given a file "data.txt" with three columns of data separated by spaces. Read it into 3 separate simple sequences.
3. Given a file "data.txt" with three columns of data separated by ":". Read it into 3 separate simple sequences.
